

We are engaged with Kenya's co-operatives especially farmers cooperatives in Rift Valley Eldoret and Baringo who are in the process of starting a working cooperation with Fleckvieh Genetics to avail insemination services to Cooperative members.

Co-operatives recruitment is going on in Kiambu Central Kenya and Mt. Kenya regions. These areas have very elaborate co-operative movements.

we have finalized agreements with K.C.C and Family bank where the bank finances farmers for crossbreeding and the payments are deducted via milk deliveries to K.C.C. This will enable many co-operatives societies to benefit from this arrangement. Please enquire with us for more information or call Dr. Anthony Gichohi on 0727 665885.

Fleckvieh invites all co-operative societies to work directly with us when buying semen for their farmers. This will help farmers to get semen at a discounted price.

Currently Fleckvieh is working directly with Muki Farmers Society in Kinangop, distributing semen to their farmers.
